JT PACKARD®

Time & Materials

WHY JT PACKARD?

With more than 30 years of experience in the battery industry, JT Packard is committed to customer satisfaction as a master battery distributor. We offer only the highest quality VRLA and flooded batteries, monitoring, and service to ensure the continuity of your vital operations.

PROACTIVE SOLUTIONS

When the power fails you need to be sure your critical power equipment is ready to perform. By teaming with JT Packard you proactively keep your battery systems updated and reliable. To maximize the longevity of your UPS, we can provide quotes to replace not only your batteries but your AC and DC capacitors as well. And because JT Packard purchases parts directly from the manufacturers, we buy them at a lower cost and pass the savings on to you.

QUALITY CARE

Because your business relies heavily on the performance of your critical power systems, JT Packard is committed to providing you the best service for all your critical power emergency needs. Compared to local service vendors, JT Packard sends qualified UPS and battery technicians to your site. Our fully-trained Field Engineers are equipped to handle just about every situation and are ready with an escalation plan should unforeseen problems arise. We also offer one of the best warranty plans in the industry: full 3 year coverage on most of the batteries we sell.

BATTERY RECYCLING

JT Packard is committed to a sustainable global environment, so all spent battery cores are sent to an EPA approved facility for recycling. A certificate showing your batteries were properly disposed of is also available.
