

WHY JT PACKARD?

JT Packard provides the most comprehensive line of batteries with services to support your weakest, and most critical, power supply link. As a master battery distributor, we carry the leading brands at competitive prices and back them with maintenance, monitoring, testing, spill containment, and disposal services. JT Packard self-performs battery maintenance and is a warranty agent for many battery brands. Our engineers have the skills necessary to work on both your batteries and UPS systems.

SALES

JT Packard maintains an inventory of leading battery brands, such as EnerSys, CSB, C&D, Power, Deka/East Penn, and GNB. We also offer a wide range of accessories, including spill containment equipment, racks and cabinets, cables, chargers and battery monitoring systems. We remove and replace more than 65,000 batteries annually.

SERVICE

Batteries are the weakest link in your critical power supply. Routine battery maintenance is essential for reliable power availability. All JT Packard maintenance plans are provided in accordance with IEEE Standards 1188 and 450 for VRLA and flooded batteries, respectively.

MONITORING

The purpose of the Continuous Battery Monitoring Program is to provide you with a more reliable preventative maintenance program. Batteries are responsible for more than 14% of power surety system failures. Although regular maintenance and inspection improves reliability, batteries can degrade in as little as two weeks.

FEATURES & BENEFITS

- JT Packard is committed to providing a sustainable global environment, so all spent battery cores are sent to an EPA-approved installation for recycling and reuse
- JT Packard offers service plans tailored to match your battery type and application
- As a master battery distributor, we offer competitive pricing on a wide variety of batteries
